Notice the following:

- There are two sources listed at the bottom in alphabetical order and separated by a semicolon (;).
- The sources listed tell the audience where you got the information included in the slide, including the image and any insights that you have synthesized – in other words, citations are not just for direct quotes.

Notice the following:

- The citations are listed in alphabetical order by the first letter of the citation (whether that is the author or title).
- They have a "hanging" indentation, which means the second line of text is slightly indented for each entry – you can find this feature in the *Paragraph* formatting box, under the *Indentation* options.

Why do I need citations in a slide presentation?

Giving credit to the sources you reference in your presentation is not only about **compliance with copyright laws**, but it's also a critical part of **building credibility** and trust with your audience. This guide shows you how to:

- **CREATE SOURCE NOTES:** Show your audience what sources you used to create the content on each slide. A source note goes at the bottom of the slide in a font size that is easily legible for the audience. If there is more than one source to include on a slide, you can list them in alphabetical order separated by a semi-colon.
- **CREATE A BIBLIOGRAPHY:** List **all the sources you used in the research process** for the project. It includes all the sources cited on your slides and can also include other sources that were helpful but were not cited. It is usually included in the appendix of your deck.
- **CREDIT IMAGES:** Give proper attribution to any images you use in your presentation.

How to cite business sources

The table below lists types of sources typically used for business school projects. For each type of source, it provides a description, a sample citation for a bibliography, and a sample source note that would go at the bottom of a slide. Typical information you need to know about your source are:

- author or editor
- publisher
- title
- publication date
- the date of access
- the database or site

You can also use sites like [Zbib](#), [Citation Machine](#), or [TypeCite](#) to create citations. Be sure to double check the auto-generated citations and correct any errors. This guide demonstrates Chicago (Turabian) Style, which is commonly used in business sources. If you are using a different style, such as MLA or APA, you should consult the appropriate style guides or use an online citation generator.

How to credit images, charts, and graphs

How to Cite Images/Charts/Graphs in a Slide Deck

Sources: eMarketer, August 1, 2023; Forrester, August 24, 2023

Since there are two sources used in this slide, we must note both of them. Separate multiple source notes with semi-colons, and list them in alphabetical order.

Remember, not only do you need to provide the source note on the slide, but you also need to include citations for these in your bibliography. For example, on this slide, we've listed "Forrester, August 24, 2023" as one of our source notes. In the bibliography, you will include the full citation of the resource you used to find the information:

Purcell, Brandon, Jeremy Vale, and Rowan Curran. *The Executive's AI Primer*. Forrester, August 24, 2023. Accessed September 13, 2023. Retrieved from Forrester.

These charts were captured from eMarketer and Forrester. Notice that eMarketer lists McKinsey as its source. I found the Forrester image in a report entitled "The Executive's AI Primer," but Forrester lists another of its own publications as the source. **You need to cite where you found the source, not where the author found the information.**

Why? When you're presenting, you want the audience to be able to trace your research journey to the sources that you used.
